ABSTRACT

The present invention provides for a composition comprising:

a composition formed by heating to a temperature of from about 300°C and above a

mixture of:

5 an organometallic composition and an aromatic-acetylene containing compound; and
wherein said organometallic composition comprises the formula:

wherein A is selected from the group consisting of H,

and

wherein M is a metal;

wherein Rx and Ry are independently selected from the group consisting of an aromatic, a substituted aromatic group and combinations thereof;

wherein m, s and z are ≥ 0 ;

wherein m and s are independently determined in each repeating unit;

15 wherein said aromatic-acetylene containing composition is 1,2,4,5-tetrakis(phenylethynyl)benzene, 1,2,4-tris(phenylethynyl)benzene or 1,3,5-tris(phenylethynyl)benzene; and

wherein said organometallic composition and said aromatic-acetylene composition are molar mix proportions of between 1 and 99 of said organometallic composition and between 99 and 1 of said aromatic-acetylene composition.
